

Grade 9 Science

Curricular Competencies

Content	Big Ideas		Curricular Competencies						
	Questioning & Predicting	Planning & Conducting	Processing & Analyzing Data & Info	Evaluating	Applying & Innovating	Communicating			
*Cells are derived from cells.	Demonstrate a sustained intellectual curiosity about a scientific topic or problem of personal interest	Collaboratively and individually plan, select, and use appropriate investigation methods, including field work and lab experiments, to collect reliable data (qualitative and quantitative)	Experience and interpret the local environment	Evaluate their methods and experimental conditions, including identifying sources of error or uncertainty, confounding variables, and possible alternative explanations and conclusions	Critically analyze the validity of information in secondary sources and evaluate the approaches used to solve problems	Formulate physical or mental theoretical models to describe a phenomenon			
*The electron arrangement of atoms impacts their chemical nature.	Make observations aimed at identifying their own questions, including increasingly complex ones, about the natural world	Assess risks and address ethical, cultural and/or environmental issues associated with their proposed methods and those of others	Apply First Peoples perspectives and knowledge, other ways of knowing, and local knowledge as sources of information	Demonstrate an awareness of assumptions, question information given, and identify bias in their own work and that of others	Contribute to care for self, others, community, and world through personal or collaborative approaches	Communicate scientific ideas, claims, information, and perhaps a suggested course of action, for a specific purpose and audience, constructing evidence-based arguments and using appropriate scientific language, conventions, and terminology			
*Electric current is the flow of electric charge.	Formulate multiple hypotheses and predict multiple outcomes	Select and use appropriate equipment, including digital technologies, to systematically and accurately collect and analyze data	Seek and analyze patterns, trends, and connections in data, including describing relationships between variables (dependent and independent) and identifying inconsistencies	Describe specific ways to improve their investigation methods and the quality of the data	Consider social, ethical, and environmental implications of the findings from their own and others' investigations	Express and reflect on a variety of experiences, perspectives, and worldviews through place			
*The biosphere, geosphere, hydrosphere, and atmosphere are interconnected, as matter cycles and energy flows through them.	Ensure that safety and ethical guidelines are followed in their investigations	Construct, analyze and interpret graphs (including interpolation and extrapolation), models and/or diagrams	Analyze cause-and-effect relationships	Evaluate the validity and limitations of a model or analogy in relation to the phenomenon modelled	Transfer and apply learning to new situations	Consider the role of scientists in innovation			
sexual reproduction	mitosis		Use knowledge of scientific concepts to draw conclusions that are consistent with evidence	Demonstrate specific ways to improve their investigation methods and the quality of the data	Generate and refine ideas when problem solving	Contribute to finding solutions to problems at a local and/or global level through inquiry			
asexual reproduction	different forms		Analyze cause-and-effect relationships	Evaluate the validity and limitations of a model or analogy in relation to the phenomenon modelled	Contribute to care for self, others, community, and world through personal or collaborative approaches	Contribute to finding solutions to problems at a local and/or global level through inquiry			
human sexual reproduction	meiosis		Evaluate their methods and experimental conditions, including identifying sources of error or uncertainty, confounding variables, and possible alternative explanations and conclusions	Demonstrate an awareness of assumptions, question information given, and identify bias in their own work and that of others	Consider social, ethical, and environmental implications of the findings from their own and others' investigations	Consider the role of scientists in innovation			
element properties as organized in the periodic table			Describe specific ways to improve their investigation methods and the quality of the data	Critically analyze the validity of information in secondary sources and evaluate the approaches used to solve problems	Critically analyze the validity of information in secondary sources and evaluate the approaches used to solve problems	Formulate physical or mental theoretical models to describe a phenomenon			
The arrangement of electrons determines the compounds formed by circuits — must be complete for electrons to flow			Evaluate the validity and limitations of a model or analogy in relation to the phenomenon modelled	Contribute to care for self, others, community, and world through personal or collaborative approaches	Contribute to care for self, others, community, and world through personal or collaborative approaches	Communicate scientific ideas, claims, information, and perhaps a suggested course of action, for a specific purpose and audience, constructing evidence-based arguments and using appropriate scientific language, conventions, and terminology			
voltage, current, and resistance			Consider the changes in knowledge over time as tools and technologies have developed	Consider the changes in knowledge over time as tools and technologies have developed	Consider the changes in knowledge over time as tools and technologies have developed	Express and reflect on a variety of experiences, perspectives, and worldviews through place			
effects of solar radiation on the cycling of matter and energy			Connect scientific explorations to careers in science	Exercise a healthy, informed skepticism and use scientific knowledge and findings to form their own investigations to evaluate claims in secondary sources	Exercise a healthy, informed skepticism and use scientific knowledge and findings to form their own investigations to evaluate claims in secondary sources	Communicate scientific ideas, claims, information, and perhaps a suggested course of action, for a specific purpose and audience, constructing evidence-based arguments and using appropriate scientific language, conventions, and terminology			
matter cycles within biotic and abiotic components of ecosystems			Exercize a healthy, informed skepticism and use scientific knowledge and findings to form their own investigations to evaluate claims in secondary sources	Consider social, ethical, and environmental implications of the findings from their own and others' investigations	Consider social, ethical, and environmental implications of the findings from their own and others' investigations	Express and reflect on a variety of experiences, perspectives, and worldviews through place			
sustainability of systems			Consider the changes in knowledge over time as tools and technologies have developed	Critically analyze the validity of information in secondary sources and evaluate the approaches used to solve problems	Critically analyze the validity of information in secondary sources and evaluate the approaches used to solve problems	Formulate physical or mental theoretical models to describe a phenomenon			
First Peoples knowledge of interconnectedness and sustainability			Connect scientific explorations to careers in science	Exercise a healthy, informed skepticism and use scientific knowledge and findings to form their own investigations to evaluate claims in secondary sources	Exercise a healthy, informed skepticism and use scientific knowledge and findings to form their own investigations to evaluate claims in secondary sources	Communicate scientific ideas, claims, information, and perhaps a suggested course of action, for a specific purpose and audience, constructing evidence-based arguments and using appropriate scientific language, conventions, and terminology
